The Carson National Forest invites you to Think Like a District Ranger

at a Forest Plan Revision

Community Meeting

What is the Assessment and why does it matter?

- Our current Forest Plan is 29 years old and does not adequately provide a "vision" of the future to manage for sustainable forest ecosystems and best provide for the needs of today's forest user.
- The forest is analyzing resource areas to assess current condition and trend based on current plan direction to determine which are not in a sustainable condition.
- The results (key findings) highlight those resource areas most at risk of not being sustainable under current plan management direction.

What is this Important?

Resources that are unsustainable will not provide that same benefits for Forest Users that they do today.

What is the purpose of these meetings?

- The Forest will present the key findings (resource areas at risk) identified by the assessment and the preliminary change to plan management directions needed to address these risks.
- We want your input on the best way to address the risks to sustainability
- The public will have the opportunity to provide new or alternative plan management solutions.

Come prepared to:

- 1. Provide Management ideas that address the identified by the Key Finding that affect the way you use the **Carson National Forest**
- 2. Identify other areas of concern which may require new Management Ideas in revised forest plan.

Come prepared to:

1. The full draft assessment, draft key findings, and preliminary need for change statements are posted on the Carson National Forest Plan Revision website. (see below)

Farmington	Thursday, May 28	6-8 p.m.	San Juan College, 4601 College Blvd, Room 9012
